

Unleash the Power of VoIP

Transform your communications

What is VoIP

VoIP, or Voice over Internet Protocol, is a technology that allows you to make phone calls over the internet instead of traditional telephone lines.

VoIP converts your voice into digital data packets and sends them across an IP network, such as the internet, to the recipient. VoIP offers cost savings, flexibility, advanced features, and scalability compared to traditional phone systems. It enables businesses to make calls from various devices, supports mobility and remote work, and provides high-quality and reliable communication.

Why Choose Us?

We offer the perfect end to end solution designed for schools or businesses of all sizes - with low monthly costs, free local call minutes and 30 day contracts, ensuring cost control remains a top priority.

How It Works:

Our service will transition you with ease over to VoIP. We can either move your existing landline number or have a new number assigned. With our user-friendly web portal and smartphone app, you have complete control at your fingertips.

No Expensive On-Site Equipment:

We have flexible solutions which can allow use of existing equipment (such as smartphones / tablets / PCs) or offer leased or one-off purchases of IP phones / headsets. Furthermore, we can provide data cabling, data ports and switch installations if required.

Cost Savings That Make a Difference

Say goodbye to high phone bills. VoIP offers significant cost savings compared to traditional phone systems. With VoIP, you can make domestic and international calls at a fraction of the cost, saving your business substantial amounts of money. Additionally, there's no need for expensive hardware installations or maintenance, reducing your infrastructure costs. Experience affordable communication that doesn't compromise on quality.

Seamless Mobility and Remote Work

In today's dynamic landscape, mobility is key. VoIP enables you to stay connected on the go. Whether you're in the office, working from home, or traveling, you can access your business phone system from any device with internet connectivity. Seamlessly transfer calls, hold conferences, and collaborate with your team no matter where you are. Embrace the flexibility and freedom that VoIP offers, empowering you to work efficiently from anywhere.

Quality and Reliability

VoIP utilises cutting-edge technology and robust network infrastructure to deliver exceptional call clarity. You will get access to traditional features that you are used to and much more such as call forwarding, call waiting and voicemail. An additional line feature also allows you to have more than 1 inbound or outbound call at once.
